

(LTD) Linear time Invariant

Convolution Sum / Integral

$x[n]$ x'in impulse ile qarpma.

$$x[n] = \sum_{k=-\infty}^{\infty} x[k] \delta[n-k]$$

$$H \{ \delta[n-k] \} = h[n-k] \quad \left. \vphantom{\sum} \right\} \text{impulse response}$$

$$y[n] = \sum_{k=-\infty}^{\infty} x[k] \cdot h[n-k] \quad \left. \vphantom{\sum} \right\} \text{conv sum}$$

$w_n[k]$ \rightarrow k parametresi
kontribiyon yapma

Property

Değişime (Commutative)
Dağılıma (Distributive)
Birleşme (Associative)

Memoryless

$$h[k] = c \cdot \delta[k] \\ h[k] = 0 \text{ for } k \neq 0$$

Causality

$$h[k] = 0 \text{ for } k < 0$$

Stable

$$\sum_{k=-\infty}^{\infty} |h[k]| < \infty$$

Step Response

$$s[n] = \sum_{k=-\infty}^n h[k] \quad \left(u[n] = \sum_{k=-\infty}^n \delta[k] \right)$$

- k olduktan sonra negatif
- impulse function: orijinal ler.
